

GE^oCHRON[®]

A timepiece. A masterpiece.™

The world's finest timepiece
tells more than just time.

The Geochron® World Clock.

{It also tells the world something about you.}

They have adorned the offices of the world's largest organisations. The walls of private yachts and aircraft. The homes of the wealthy. They are the prized possession of discerning individuals who need to know more than just the local time.

Handmade, each Geochron is a moving masterpiece. It shows you at a glance the current time of the world — every country and city — within a mesmerising display of the progression of daylight around the Earth.

A Geochron is your world view of day and night, the precise time, the date and day of the week — even the solstices and equinoxes. All without a single digital component. Each clock is carefully crafted and calibrated for unparalleled accuracy and precision.

Beautiful, unique, pristine and of the highest quality, a Geochron is much more than a clock. You'll be the owner of what the Smithsonian Institution calls "the last significant contribution in time keeping."

Map – Each world map is made using state-of-the-art lithographic printing designed to ensure the map's vibrancy and sharpness for the lifetime of the clock.

Minute dial – (Optional) Offers the time to the minute in any city in the world.

Terminator line – Displays true moment of sunrise and sunset worldwide.

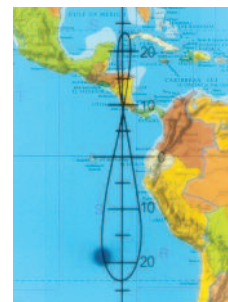

Time scale – The “watch” of the timepiece. As the map rotates, numbers reveal the corresponding time in each of 40 time zones.

Calendar – More than just a calendar, this feature allows you to determine time of sunset/sunrise for any date, present or future.

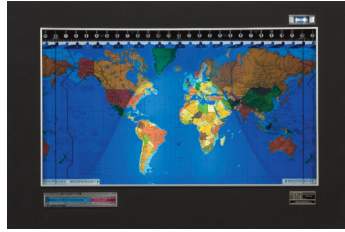

Day of week band – Find the day of the week in any region by using this band along with the map's international date line.

Analemma – Allows you to follow the track of the sun by degrees of latitude and its position relative to the equinoxes and the northern and southern solstice points.

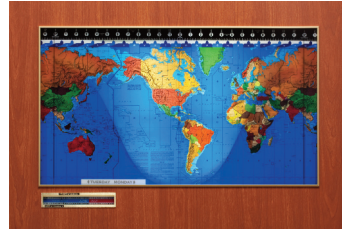

Illuminated Sun Spot - energised sun button on the Analemma (extra cost).
